Name : ALEJO DEIDRE KAY

Sex/Age : F/50Y

Patient No : 1286587

Admission/Visit No : 10809645/2

Ward/Bed : NSC5 C506A

Doctor : SHIU CHO TAK 1208

Exam Regn No : XC49052

Exam Date : 13/06/2008

Exam : RFA OF LT. LUNG TUMOUR

REPORT :

The dominant tumour nodule in the left upper lobe was identified with the patient in the supine position.

A clustered Radionic Cool-tip needle was inserted into the centre of the lesion. A 12 minute cycle of RFA was performed with the tip of the electrode at the far end of the lesion. The needle was subsequently withdrawn to cover the near end of the lesion and a second 12 minute RFA cycle applied.

A satisfactory rim of ground glass pulmonary change is seen surrounding the tumour. There is a small amount of reactional pleural fluid. No pneumothorax is seen in the post-procedure CT.

Thank you for your kind referral.

LEE JIMMY PUI KEUNG
MBBS, FRCR, FRANZCR
